

TP1 Sprint Backlog

CSE 360 – Team Project Phase 1

Team 4

Objective

The Foundations code already implements the New User functionality and the Admin invitation workflow. This Sprint Backlog identifies the Phase 1 user stories that still require implementation, along with the required technical tasks.

User Story Analysis

ID	User Story	Current Status	Missing Functionality	Owner	Target Date
US-01	As an admin, I can set a one-time password for a user who has forgotten their password.	Not Built	Admin creates a temporary password. User logs in with it, creates a new password, the temporary password is removed, and the user logs in again.	Ezequiel	Sept. 15
US-02	As an admin, I can delete a user account.	Not Built	Add delete functionality, confirmation dialog, prevent self-deletion, and remove user access.	Harshith	Sept. 13
US-03	As an admin, I can list all user accounts.	Not Built	Display username, full name, email address, and assigned roles for every user.	Ojas	Sept. 13
US-04	As an admin, I can add or remove roles for each user.	Partial	Roles can be assigned during invitation, but existing users cannot have their roles modified.	Levin	Sept. 15
US-05	Replace Role1 and Role2 with the project's actual roles.	Partial	Replace placeholder roles throughout the application while preserving the existing role structure.	Levin	Sept. 15

Existing Functionality

The following features are already implemented in the Foundations code and are not included in this sprint.

- First user becomes the administrator.
- User registration.
- User login.
- Single-role login flow.
- Multi-role selection.
- User logout.
- Admin invitation system.

Sprint Goal

By the end of TP1, the team will complete:

- One-time password reset
- User account deletion
- User listing
- User role management
- Username validation integration
- Password validation integration
- Maximum-length validation
- Updated user interface
- Automated testing
- Updated documentation
